#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 101

- 1) 35 U.S.C. 101 reads as follows:
  - Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.
- 2) Claims 1-28 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

As an initial matter, the United States Constitution under Art. I, §8, cl. 8 gave

Congress the power to "[p]romote the progress of science and useful arts, by securing
for limited times to authors and inventors the exclusive right to their respective writings
and discoveries". In carrying out this power, Congress authorized under 35 U.S.C.
§101 a grant of a patent to "[w]hoever invents or discovers any new and useful process,
machine, manufacture, or composition or matter, or any new and useful improvement
thereof." Therefore, a fundamental premise is that a patent is a statutorily created
vehicle for Congress to confer an exclusive right to the inventors for "inventions" that
promote the progress of "science and the useful arts". The phrase "technological arts"
has been created and used by the courts to offer another view of the term "useful arts".

See *In re Musgrave*, 167 USPQ (BNA) 280 (CCPA 1970). Hence, the first test of
whether an invention is eligible for a patent is to determine if the invention is within the
"technological arts".

Further, despite the express language of §101, several judicially created exceptions have been established to exclude certain subject matter as being patentable subject matter covered by §101. These exceptions include "laws of nature", "natural

Art Unit: 3629

phenomena", and "abstract ideas". See *Diamond v. Diehr*, 450, U.S. 175, 185, 209 USPQ (BNA) 1, 7 (1981). However, courts have found that even if an invention incorporates abstract ideas, such as mathematical algorithms, the invention may nevertheless be statutory subject matter if the invention as a whole produces a "useful, concrete and tangible result." See *State Street Bank & Trust Co. v. Signature Financial Group, Inc.* 149 F.3d 1368, 1973, 47 USPQ2d (BNA) 1596 (Fed. Cir. 1998).

This "two prong" test was evident when the Court of Customs and Patent Appeals (CCPA) decided an appeal from the Board of Patent Appeals and Interferences (BPAI). See *In re Toma*, 197 USPQ (BNA) 852 (CCPA 1978). In *Toma*, the court held that the recited mathematical algorithm did not render the claim as a whole non-statutory using the Freeman-Walter-Abele test as applied to *Gottschalk v. Benson*, 409 U.S. 63, 175 USPQ (BNA) 673 (1972). Additionally, the court decided separately on the issue of the "technological arts". The court developed a "technological arts" analysis:

The "technological" or "useful" arts inquiry must focus on whether the claimed subject matter...is statutory, not on whether the product of the claimed subject matter...is statutory, not on whether the prior art which the claimed subject matter purports to replace...is statutory, and not on whether the claimed subject matter is presently perceived to be an improvement over the prior art, e.g., whether it "enhances" the operation of a machine. In re Toma at 857.

In *Toma*, the claimed invention was a computer program for translating a source human language (e.g., Russian) into a target human language (e.g., English). The court found that the claimed computer implemented process was within the "technological art"

Art Unit: 3629

because the claimed invention was an operation being performed by a computer within a computer.

The decision in State Street Bank & Trust Co. v. Signature Financial Group, Inc. never addressed this prong of the test. In State Street Bank & Trust Co., the court found that the "mathematical exception" using the Freeman-Walter-Abele test has little, if any, application to determining the presence of statutory subject matter but rather, statutory subject matter should be based on whether the operation produces a "useful, concrete and tangible result". See State Street Bank & Trust Co. at 1374. Furthermore, the court found that there was no "business method exception" since the court decisions that purported to create such exceptions were based on novelty or lack of enablement issues and not on statutory grounds. Therefore, the court held that "[w]hether the patent's claims are too broad to be patentable is not to be judged under §101, but rather under §§102, 103 and 112." See State Street Bank & Trust Co. at 1377. Both of these analysis goes towards whether the claimed invention is non-statutory because of the presence of an abstract idea. Indeed, State Street abolished the Freeman-Walter-Abele test used in Toma. However, State Street never addressed the second part of the analysis, i.e., the "technological arts" test established in Toma because the invention in State Street (i.e., a computerized system for determining the year-end income, expense, and capital gain or loss for the portfolio) was already determined to be within the technological arts under the *Toma* test. This dichotomy has been recently acknowledged by the Board of Patent Appeals and Interferences (BPAI) in affirming a

Art Unit: 3629

§101 rejection finding the claimed invention to be non-statutory. See *Ex parte Bowman*, 61 USPQ2d (BNA) 1669 (BdPatApp&Int 2001).

In the instant application, the method claims are comprising the steps of: providing information on usage for computer platforms, determining the processing capacity for the computer platforms, deriving a cost and capacity measurement, determining an amount of the required processing capacity and deriving a cist and capacity measurement for the computer platforms, and these claims are not within the technological arts – i.e., there is no computer implementation between these computer platforms to facilitate the steps as claimed by the applicant, or any other technology employed.

### Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
  The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4) Claims 1-29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In Claim 1, lines 7-8; Claim 15, lines 10-11; and Claims 29, line 8, respectively, the recitation of "the required processing" lack antecedent basis.

Art Unit: 3629

## Claim Rejections - 35 USC § 102

5) Claim 29, as far as it is definite, is rejected under 35 U.S.C. 102(e) as being anticipated by Robertazzi et al. (US 6,370,560).

Robertazzi et al. discloses an apparatus:

a storage base (115);

means for determining (103), processing capacity for first and second computers;

means for deriving a cost and capacity measurement for platforms (see Figs. 1-6

and the descriptions thereof);

means for partitioning the processing capacity of computer platforms (se Figs. 5-

7 and the description thereof); and

means for deriving a cost and capacity measurement for the first computer

platform (see Figs. 1-7).

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard Woo whose telephone number is 703-308-7830. The examiner can normally be reached on Monday-Friday from 8:30 AM -5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Weiss can be reached on 703-308-2702. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9306 for regular communications and for After Final communications.
